

Task 3 : Communication Channels and Collaboration

Subject: Introduction to the Team - Adarsh Kumar

Dear Team,

1. I hope this message finds you all in good health and high spirits. It is with great enthusiasm that I introduce myself as a new member of this exceptional team at INTEL-SIP. I am Adarsh Kumar, currently pursuing B.Tech. in Computer Science and Engineering from VIT Chennai.
2. Throughout my academic journey, I have embraced the values of perseverance and continuous learning. I strongly believe that success comes through consistent effort and a willingness to adapt and grow. These values drive my approach to work and life, and I am committed to delivering my best in every endeavor.
3. One of my favourite books, which has significantly impacted my personal and professional development, is the Bhagavad Gita. One quote from the Gita that resonates deeply with me is, "You have the right to perform your prescribed duty, but you are not entitled to the fruits of your actions." This quote reminds me to focus on the process and effort rather than being solely outcome-oriented, emphasising the importance of dedication and hard work.
4. Outside of work and academics, I find joy and relaxation in watching anime and listening to music. Anime has always captivated me with its unique storytelling and artistry, while music serves as a source of inspiration and solace. These hobbies allow me to unwind and maintain a balanced and fulfilling life.
5. In terms of relevant experience, I had the opportunity to participate in a 24-hour hackathon where my team and I put in exceptional efforts. Although we did not emerge as winners, the experience taught me a valuable lesson - that regardless of the outcome, it is crucial to keep pushing forward and continue doing what we love. This experience further solidified my belief in the importance of perseverance and resilience in the face of challenges.

I am genuinely excited to collaborate and contribute to the success of this team. Thank you for the warm welcome, and I look forward to embarking on this journey with all of you!

Warm regards,
Adarsh Kumar

1. *Do you believe AI can ever develop a genuine sense of morality or ethics, or will AI's ethical behaviour always be determined by human-created rules and guidelines?*

ANS- Yes, I believe AI's ethical behaviour will always be determined by human-created rules and guidelines. AI lacks the capacity for subjective experiences, emotions, and genuine empathy, which are crucial aspects of understanding and practising morality and ethics. While AI can be programmed to follow ethical principles, it ultimately relies on human decision-making and guidance to define and enforce ethical behaviour. The responsibility for ensuring ethical AI lies with human designers and developers.
